EDUCATION

University of Alberta

BSc Honors in Computing Science, GPA: 3.5/4.0

Edmonton, AB

Sep. 2023 – May 2027

– **Relevant Coursework:** Algorithms, Computer Architecture, Advanced Mathematics, Databases

EXPERIENCE

Outlier AI

Remote

AI Prompt Engineer and Front-End Evaluator

May 2025 – Present

- Engineered **natural-language prompts** to elicit functional front-end code responses from LLMs, focusing on HTML/CSS/JS.
- Led **multi-turn conversations** with models to iterate on UI/UX improvements, bug fixes, and new feature implementations.
- Authored **rubrics** to evaluate LLM output against clearly defined frontend requirements, emphasizing clarity, technical precision, and visual fidelity.
- Tracked model performance over time, identifying **failure cases** and providing structured feedback to enhance model capabilities.

Mercor AI

Remote

Computing Science Expert

Jan. 2025 – May 2025

- Assessed the **correctness**, **completeness**, and **clarity** of AI-generated solutions to STEM questions, ensuring alignment with expert-level reasoning and academic standards.
- Evaluated **step-by-step solutions** in mathematics, and computer science for **factual accuracy**, **logical consistency**, and appropriate formatting.
- Applied formal evaluation criteria to provide detailed **feedback** on AI output quality, including grading explanations, identifying logical fallacies, and verifying mathematical correctness.
- Contributed to iterative improvement of AI **guidelines** by highlighting ambiguities and edge cases in response standards.

UASTarr Alberta Rocket Research

Edmonton, AB

Software Team Member

Jan. 2024 – May 2024

- Contributed to the **design and development** of the UASTARR website, fixing bugs, implementing features, and improving user experience.
- Enhanced rocket tracking accuracy by **12%** through the integration of efficient tracking algorithms, including **Kalman filtering**, and optimized code performance.

AlbertaSat

Edmonton, AB

Software Team Member

Sep. 2023 – Dec. 2023

- Helped develop an open-source **React** web application with a **RESTful API** backend for CubeSat satellite communication.
- Wrote a **C script** using the Sub-GHz radio driver on an **STM32 board** to receive and decode radio packets from a team-built rocket.

PROJECTS

Sample Searcher

React, Node.js, MySQL, Python, AWS

Link: [Samplesearcher.ca](https://samplesearcher.ca)

- Developed a **full-stack web application** that lets users browse and discover music samples from a curated dataset of 2,000+ songs scraped with Python.
- Created **RESTful API endpoints** with Node.js and Express, backed by a MySQL database for efficient data management.
- Deployed the backend on **AWS EC2** with **Docker** and CI/CD pipelines to ensure scalable, automated deployment.
- Designed a **responsive React frontend** featuring dynamic song display, filtering, and pagination for optimal user experience.

TECHNOLOGIES

Languages: Python, C, JavaScript, TypeScript, SQL, Assembly

Frameworks: React, Next.js, Node.js, Tailwind CSS, Vite.js, MongoDB

Developer Tools: Git, Docker, Linux, AWS, Google Cloud, Heroku, Netlify
