EDUCATION

BSc Honors in Computing Science

University of Alberta, GPA: 3.4/4.0

Edmonton, AB

Sep. 2023 – May 2027

- **Relevant Coursework:** Algorithms, Data Structures, Computer Architecture, Advanced Mathematics, Databases (SQL), Software Engineering (Java)

EXPERIENCE

Incoming Software Development Engineer Intern

Agriculture and Agri-Food Canada

Edmonton, AB

Jan. 2026 – May 2026

Computing Science and Mathematics Expert

Mercor AI

Edmonton, AB

Jan. 2025 – Sep. 2025

- Built **Python** scripts to automate rubric generation and streamline large-scale evaluation workflows, improving speed and consistency.
- Created lightweight **JavaScript** prototypes to simulate LLM frontend behavior, enabling rapid testing of rubric coverage and error detection.
- Evaluated **AI-generated STEM solutions** for factual accuracy, logical consistency, and clarity, providing structured feedback to improve model performance.
- Contributed to iterative improvement of AI **guidelines** by refining rejection criteria, rubric clarity, and evaluation standards.

AI Prompt Engineer and Front-End Evaluator

Outlier AI

Remote

May 2025 – Sep. 2025

- Engineered **natural-language prompts** to elicit functional front-end code responses from LLMs, focusing on **HTML/CSS/JS**.
- Led **multi-turn conversations** with models to iterate on UI/UX improvements, bug fixes, and new feature implementations.
- Authored **rubrics** to evaluate LLM output against clearly defined frontend requirements, emphasizing clarity, technical precision, and visual fidelity.

Software Team Member

UAS Starr Alberta Rocket Research

Edmonton, AB

Jan. 2024 – May 2024

- Contributed to the **design and development** of the UASTARR website, fixing bugs, implementing features, and improving user experience.
- Enhanced rocket tracking accuracy by **12%** through the integration of efficient tracking algorithms, including **Kalman filtering**, and optimized code performance.

AlbertaSat

Software Team Member

Edmonton, AB

Sep. 2023 – Dec. 2023

- Wrote a **C** script using the Sub-GHz radio driver on an **STM32 board** to receive and decode radio packets from a team-built rocket.

PROJECTS

Sample Searcher

React, Node.js, MySQL, Python, AWS

Link: [Samplesearcher.ca](https://samplesearcher.ca)

- Developed a **full-stack web application** that lets users browse and discover music samples from a curated dataset of 2,000+ songs scraped with Python.
- Created **RESTful API endpoints** with Node.js and Express, backed by a MySQL database for efficient data management.
- Deployed the backend on **AWS EC2** using **Docker**, **AWS CDK**, and CI/CD pipelines to ensure scalable, automated deployment.
- Designed a **responsive React frontend** featuring dynamic song display, filtering, and pagination for optimal user experience.

TECHNOLOGIES

Languages: Python, C, Java, JavaScript, TypeScript, SQL, Assembly

Frameworks: React, Next.js, Node.js, Tailwind CSS, Vite.js, MongoDB, AWS CDK

Developer Tools: Git, Docker, Linux, AWS, Google Cloud, Heroku, Netlify
